VIA ELECTRONIC SUBMISSION

Ms. Marlene H. Dortch
Secretary
Office of the Secretary
Federal Communications Commission
445 12th Street, SW
Washington, DC 20554

Re: **Written Ex Parte Communication**

*In the Matter of Revision of the Commission's Rules to Ensure Compatibility
Enhanced 911 Emergency Calling Systems, CC Docket 94-102.*

Dear Ms. Dortch:

SBC Communications Inc. submits this written *ex parte* communication, in response to a letter seeking information sent to Ms. Priscilla Hill-Ardoin, Senior Vice President, SBC Communications, from Mr. Thomas Sugrue, Chief, Wireless Telecommunications Bureau of the Federal Communications Commission, dated July 29, 2002. Specifically, Mr. Sugrue was seeking information on SBC's progress in the implementation of E911 Phase II. The attached documents contain the answers to Mr. Sugrue's questions asked in the July 29th letter.

Pursuant to Section 1.1206(b) of the Commission's rules, this presentation is being electronically filed. I ask that this letter be recognized with the proceeding identified above.

Sincerely,

A handwritten signature in black ink that reads "Jonathan J. Boynton". The signature is fluid and cursive, with "Jonathan" on top, "J." in the middle, and "Boynton" on the bottom line.

SBC Communications Inc.

Replies to the Federal Commission's Request for ILEC Wireless 911 Information

1. For each Automatic Location Information (ALI) database operated by your company, please identify:

A. The database, including its location (by city and state, or by geographic region served by the database):

See attached spreadsheets.

B. All PSAPs served by the database (by jurisdiction):

See attached spreadsheets.

C. The type of interface that your company has installed, or will install, to support passage of Phase II information to PSAPs (e.g., E2, E2+, modified PAM):

SBC provides E911 database and selective routing services utilizing two platforms: The Ameritech region is served by the SR-ALI platform, while the non-Ameritech regions (Nevada Bell; Pacific Bell; Southern New England Telephone; and Southwestern Bell) are served by the ALISA platform. Intrado, Inc provides both platforms to SBC.

With respect to PSAPs served by the SR-ALI Platform for the Ameritech region:

- For Non-Call Path Associated Signaling (NCAS) in Phase II: We will support the E2+ protocol (generally available in a October 2002 time frame).¹
- For Hybrid Call Path Associated Signaling (HCAS) in Phase II: We will support the E2 protocol (generally available in a September 2002 time frame).²

¹ The National Emergency Number Association (NENA) is currently evaluating the E2+ protocol and it is expected that NENA will endorse E2+ as the preferred interface protocol for Phase II. In light of the fact that the TIA J-STD-036 E2 standard does not allow for the inclusion of Phase I data, and the stated preference of the E2+ approach by two of the larger third party database providers, SBC believes that the E2+ interface protocol will become the de facto industry standard until official industry approval is obtained.

² The E2 + interface protocol is used to add Phase I level data to the E2 interface protocol. Since Hybrid already contains Phase I data, the E2+ protocol is not required.

With respect to PSAPs served by the ALISA Platform for the non-Ameritech regions:

- For Non-Call Path Associated Signaling (NCAS) in Phase I: SBC will continue to support the existing PSAP to ALI Messaging (PAM) protocol (currently generally available). However, if Phase I service does not currently exist, a new installation could use E2+ instead of PAM (E2+ will be generally available in the October 2002 time frame).
- For Non-Call Path Associated Signaling (NCAS) in Phase II: SBC will support the E2+ protocol (generally available in the October 2002 time frame) and PAM with MSAG Comments Field.³
- For Hybrid Call Path Associated Signaling (HCAS) in Phase II: SBC will support the E2 protocol (generally available in the September 2002 time frame).⁴

D. The routing solution(s) that the interface will support (e.g., NCAS wireline compatibility mode):

- E2 supports wireless hybrid solution.
- E2+ supports the NCAS solution.
- PAM supports wireless NCAS solution, and wireline ALI Steering.

E. The dates⁵ by which:

I. Any necessary database upgrades will be completed:

September 30, 2002

II. The interface will be available for any necessary testing with CMRS carriers, PSAPs, or third-party vendors:

On or about October 1, 2002

³ The National Emergency Number Association (NENA) is currently evaluating the E2+ protocol and it is expected that NENA will endorse E2+ as the preferred interface protocol for Phase II. In light of the fact that the TIA J-STD-036 E2 standard does not allow for the inclusion of Phase I data, and the stated preference of the E2+ approach by two of the larger third party database providers, SBC believes that the E2+ interface protocol will become the de facto industry standard until official industry approval is obtained.

⁴ The E2 + interface protocol is used to add Phase I level data to the E2 interface protocol. Since Hybrid already contains Phase I data, the E2+ protocol is not required.

⁵ These dates are subject to the vendor's present ship-by date of August 31, 2002. These dates could change if the vendor does not meet its ship-by date.

III. The interface will be available for launch of live E911 Phase II service to consumers:

On or about November 1, 2002

Specific cut-over dates must be individually negotiated between SBC and the customer.

F. If unable to identify any of the dates specified in (e), the specific reasons for such inability:

Not applicable.

2. For ALI database operated by your company, specify:

A. The type of data each database will be capable of receiving (e.g., latitude and longitude, confidence factor, uncertainty factor, address information):

- The PAM protocol is capable of receiving latitude, longitude, and confidence factor.
- The E2 protocol will be capable of receiving latitude, longitude, confidence factor, and uncertainty factor.
- The E2+ protocol will be capable of receiving latitude, longitude, confidence factor, uncertainty factor, and Phase I address information.

B. The format in which your company expects to receive data (i.e., what data fields will be used and which data will be required in each field):

The required data fields depend on the protocol used.

- PAM: Latitude, longitude, and confidence are to be received in the MSAG Comments data field.
- E2: Position information (e.g., latitude, longitude, confidence, and uncertainty) is to be received in the standard messages defined in J-STD-036.
- E2+: Position and Phase I information is to be received in the standard messages defined in J-STD-036 and supplemented by NENA.

SBC's implementation for E2 and E2+ will be fully compliant to the appropriate standards.

C. Whether the database will be capable of requesting updated location information (i.e., refresh capability):

SBC's database doesn't request updates, but certain PSAPs with the appropriate equipment can request the information and SBC's database will facilitate the request.

3. Identify the manner in which your company expects wireless carriers, public safety entities, and/or third party vendors to interconnect with the ALI databases and selective routers your company operates (e.g., specific trunking and messaging requirements):

A. Specify whether specific trunk ordering procedures are in place.

If so, indicate the standard interval for delivery of trunks (measured in business days)

Trunk ordering procedures are in place and the following chart depicts standard intervals for delivery.

SBC Region (States)	MSC to Selective Router Trunk Installation Interval
Ameritech (IL, IN, MI, OH, WI)	20 business days*
Pacific (CA, NV)	30 business days*
SNET (CT)	20 business days*
SWBT Midwest (AR, KS, MO, OK)	20 business days*
SWBT Texas (TX)	30 business days*

* upon receipt of a completed access service request (ASR)

B Specify whether Emergency Services Routing Key (ESRK)/Emergency Services Routing Digits (ESRD) policy or assignment procedures are in place:

ESRK/ESRD assignment procedures are in place.

4. Explain how the costs of upgrades to facilities operated by your company (e.g., ALI database, selective router, trunking) necessary to support wireless E911 will be recovered (e.g., through tariffs, contracts or other arrangements):

SBC supports public safety and recognizes the importance of Phase II service to our customers. SBC has invested tens of millions of dollars to be able to provide Phase II capability. SBC is committed to working with the appropriate government entities in order to expeditiously and lawfully provide Phase II service where it has been requested. Depending upon

state law, SBC can lawfully provide service with the existence and approval of:

Retail Offerings for PSAPs:

- A permanent tariff;
- An interim tariff; or
- An individual case basis contract

Carrier-to-Carrier Offerings for Wireless Carriers:

- An interconnection agreement; or
- A tariff (in certain states)

A. Please specify whether the mechanism for recovering these costs is currently in place, or, if not, when it will be in place:

Cost-recovery Mechanism for PSAPs:

- Ameritech Illinois filed a temporary tariff on August 1, 2002 that is effective for 90 days. This filing allows SBC to fulfill certain requests for Wireless 911 service while working with the Illinois Commerce Commission and PSAP customers to resolve outstanding issues.
- Southern New England Telephone in Connecticut and Ameritech Indiana will utilize existing contracts.
- Remaining States: SBC companies will file tariffs in Arkansas, California, Kansas, Missouri, Michigan, Nevada, Ohio, Oklahoma, Texas, and Wisconsin by mid-October 2002.

Cost-recovery Mechanism for Wireless Carriers:

- The predominant form of cost recovery is through interconnection agreements, but many states allow wireless carriers the ability to purchase from tariffs.⁶ Interconnect agreements do not need to be amended to reflect wireless 911.
- Tariffs will be filed in Connecticut, Indiana and Michigan by September 30, 2002.

⁶ Of course, such wireless carriers are always free to enter into interconnection agreements instead of buying services out of the state tariff.

- Tariffs will be filed in Arkansas, Kansas, Missouri, Nevada, Oklahoma, and Texas by mid-October 2002.

5. Identify any other requirements necessary to launch wireless E911 Phase II service:

None identified at this time.
